Agenda

DevOps Overview

CI strategies

CD strategies

Comparing CI/CD strategies

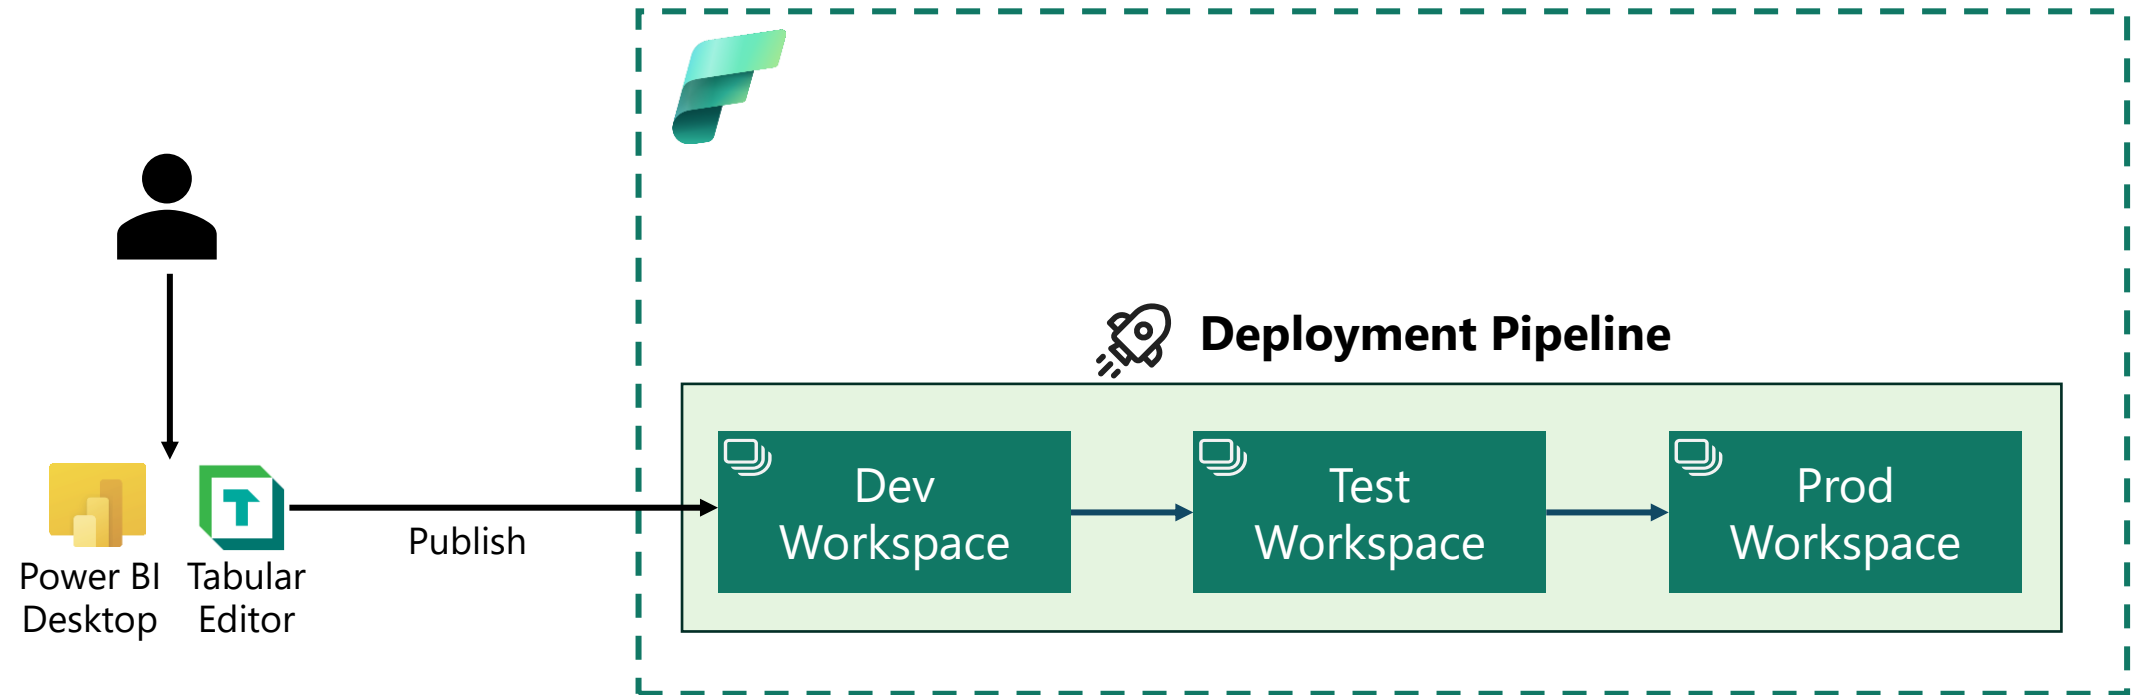

Finding a CI/CD strategy for your team

Q & A

Traditional Power BI Workflow

Challenges

Change history

Parallel development

Solution

Name
 Sales Hub 147
 Sales Hub 147_final
 Sales Hub 147_final_final
 Sales Hub 147_final_final_v2
 Sales Hub 148
 Sales Hub

Why DevOps?

Change history

Parallel development

**Automated quality
checks**

DevOps – CI/CD

DevOps – Relevant Terms

Branches

Pull Requests (PR)

**Pipelines: build
& release**

Branching Strategy – Ground Rules

Use feature branches for your work

- Use feature branches for new features and bug fixes
- Use a naming convention for feature branches

Review and merge code with pull requests

- Avoid merging branches to the main branch without a pull request
- 2 reviewers is an optimal number
- Share reviewer responsibilities across the team

Keep a high quality, up-to-date main branch

- Automatically add reviewers when a pull request is created
- Setup automatic best practice evaluation and other quality checks with build pipelines

Prerequisites

Power BI/Fabric

- ✓ Power BI Pro license
- ✓ Power BI Premium
- OR
- ✓ Fabric Capacity
- ✓ Workspace Admin

Azure DevOps

- ✓ Access or rights to a create repository
- ✓ Rights to create build & release pipelines

Admin Portal: Tenant settings

- ✓ Users can synchronize workspace items with their Git repositories

Disclaimer

Git support in preview

- ✓ Paginated reports
- ✓ Reports connected to Power BI models
- ✓ Semantic models

Git not supported

- ✓ Reports connected to AAS and SSAS models
- ✓ Push datasets
- ✓ Semantic models connected to AS
- ✓ Dataflows Gen1

Power BI features In preview

- ✓ Power BI Projects – PBIP Legacy, PBIR
- ✓ TMDL view in Power BI Desktop

Continuous Integration (CI)

Defining a CI Strategy

Development tools

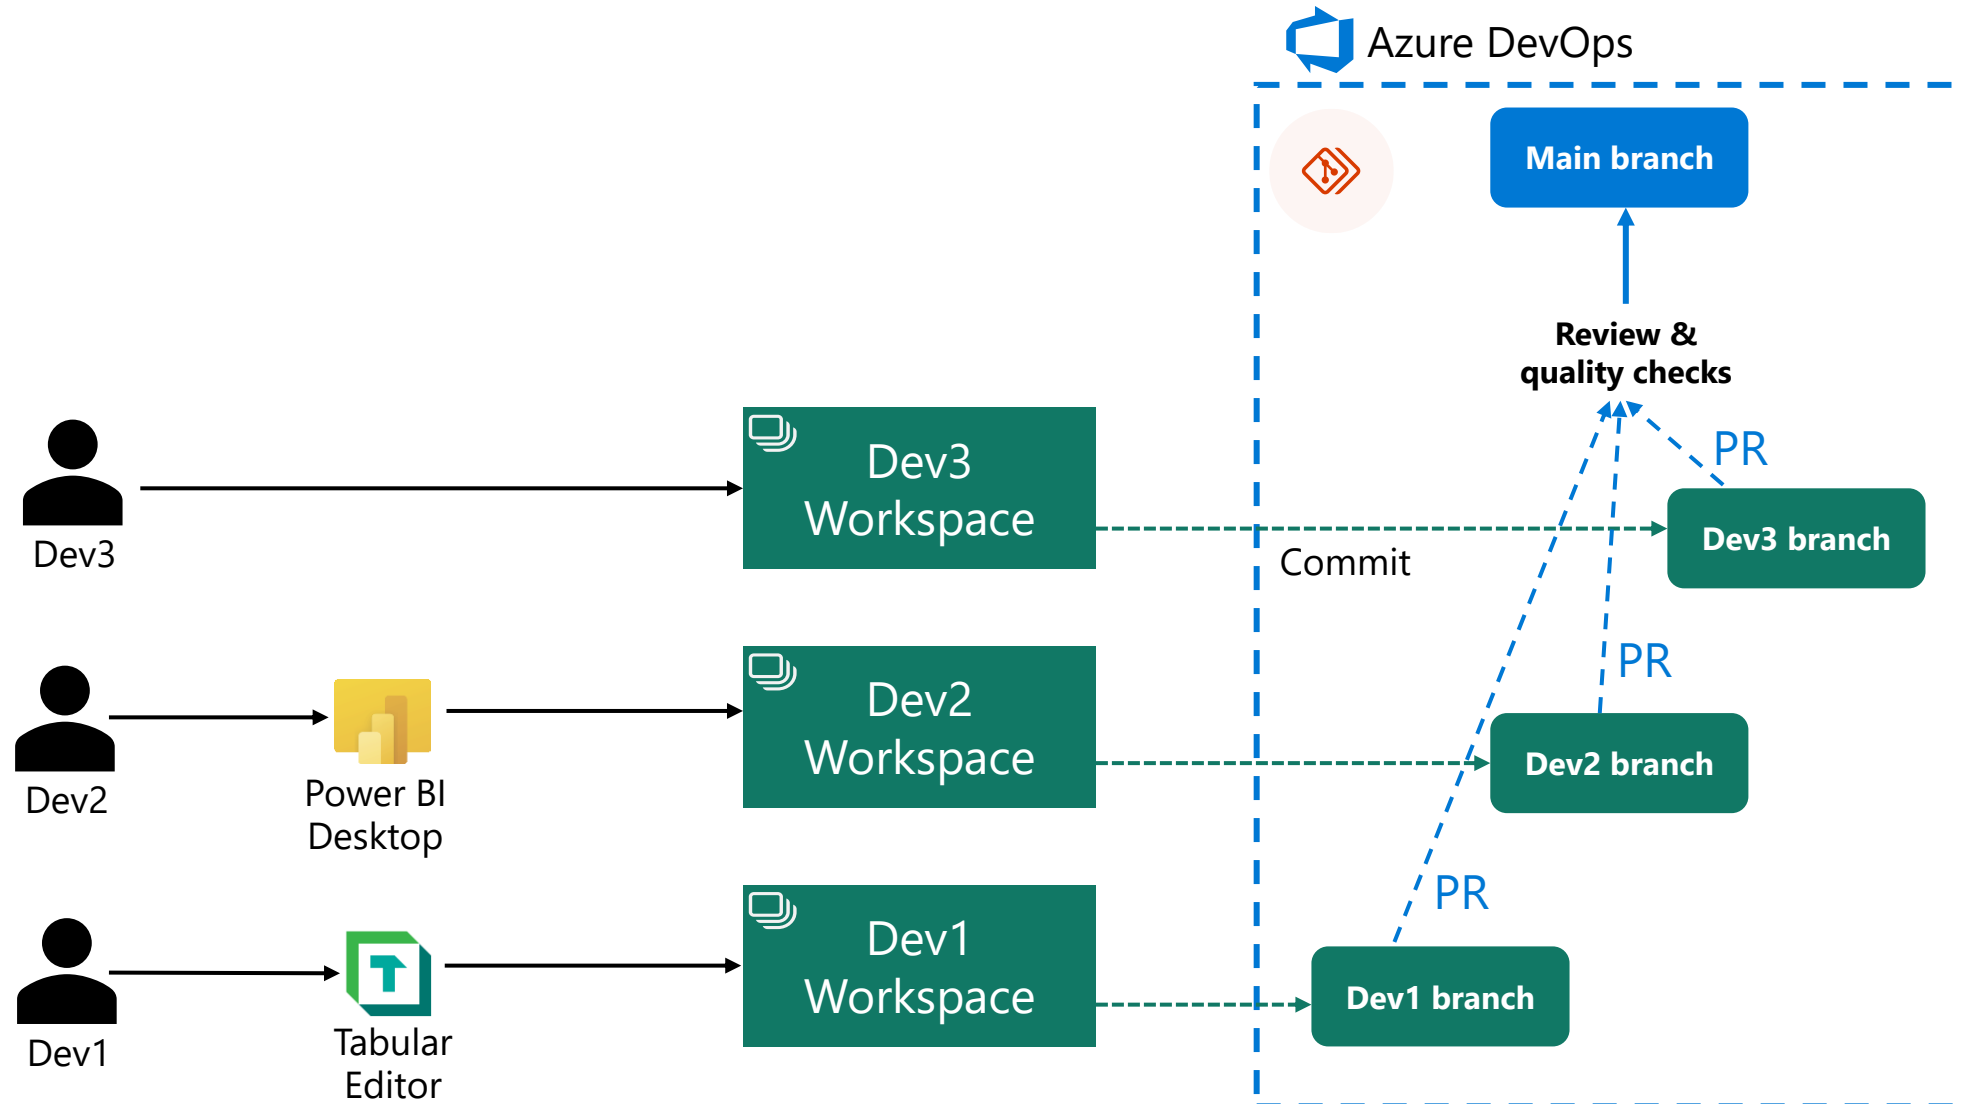

**Isolated
development
environments**

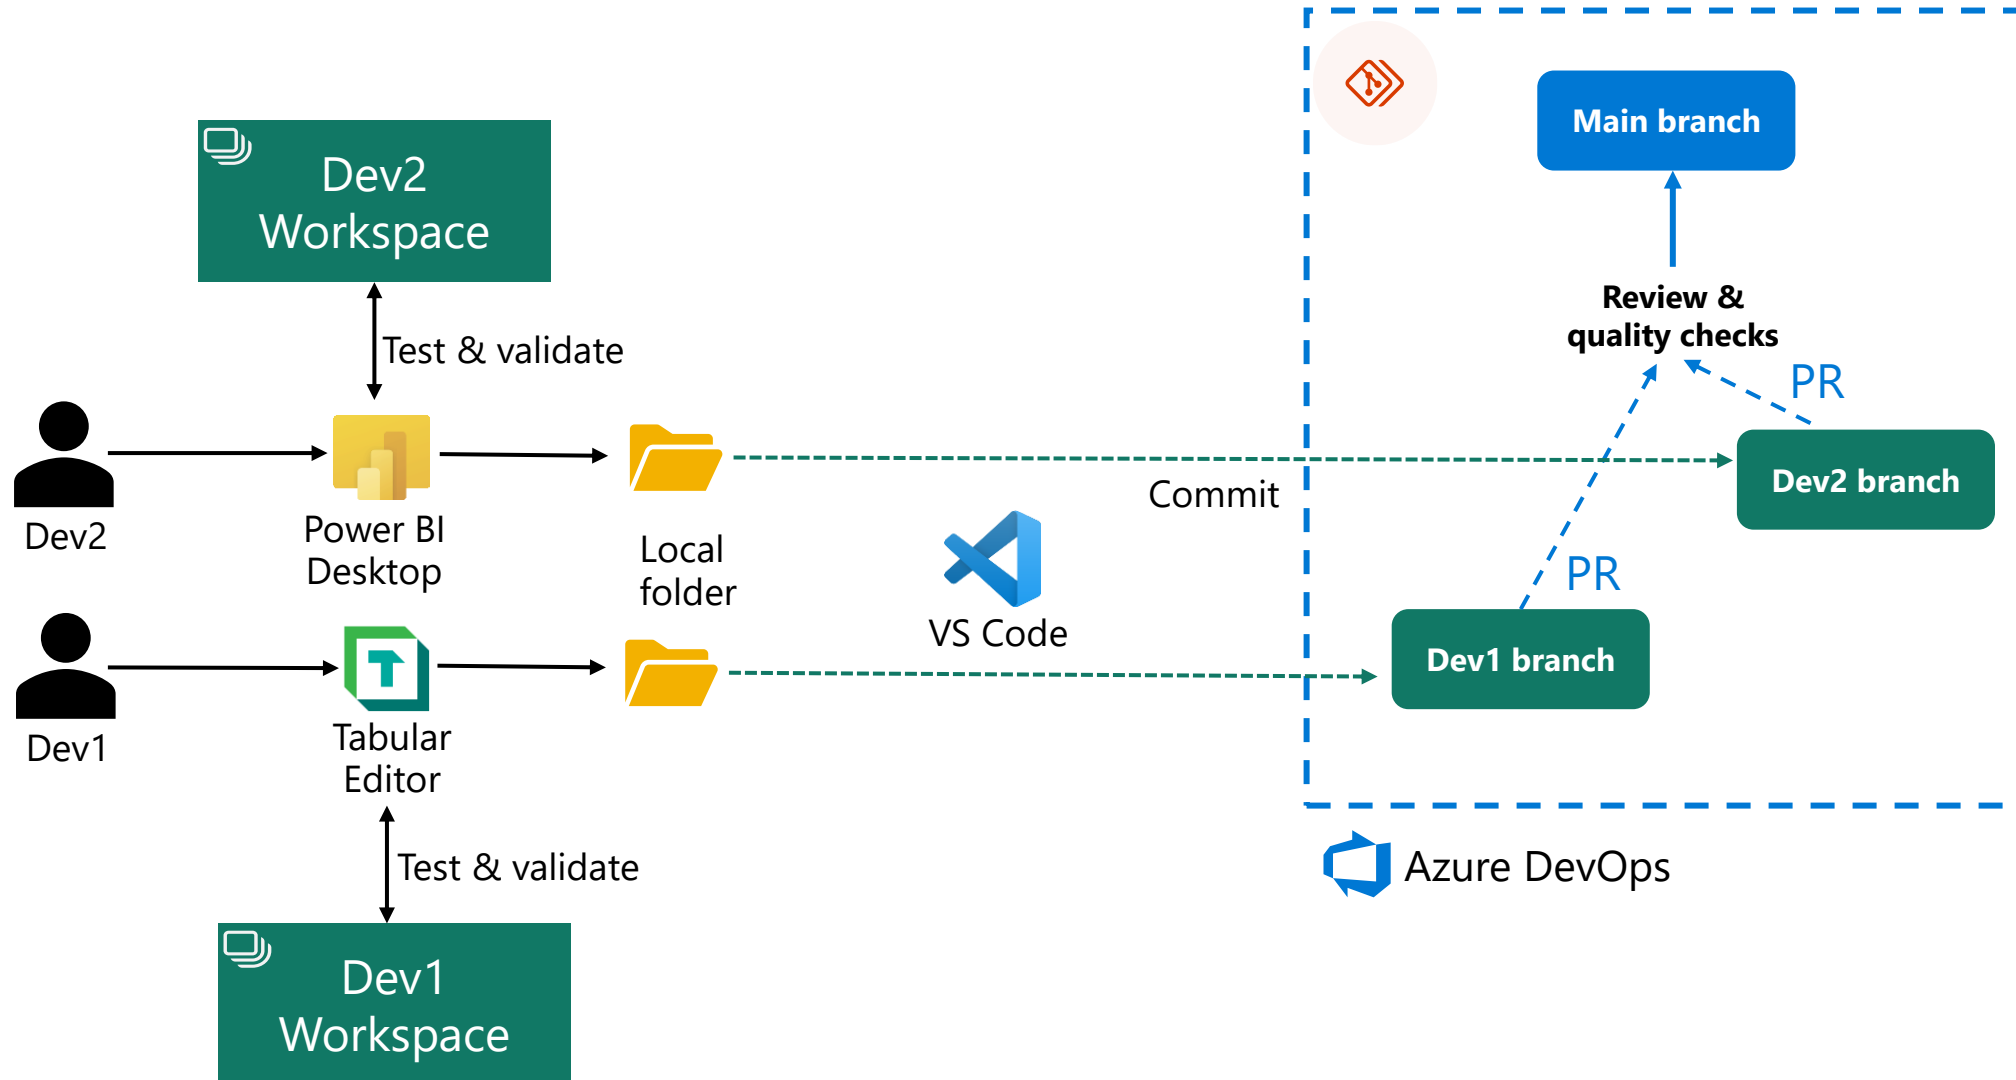

**Review & quality
checks**

CI Strategy – Using Workspace

CI Strategy – Using Client Tools

CI Strategies – Comparison

	Using Workspace	Using Client Tools
Learning Curve	Low	High
Additional Tools	No	Yes (Git, VS Code with extensions)
Cherry picking	No	Yes
Merge conflict resolution	Limited	Flexible
Operational features	Limited <ul style="list-style-type: none"> • can't create pull requests • can't visualize change history 	Extended
Supported Power BI file types	PBIX, PBIP (TMSL, TMDL)*	PBIP (TMSL, TMDL)* only
Supported file types	Fabric only	All

Continuous Deployment (CD)

Defining a CD Strategy

**Feature parity
across
environments**

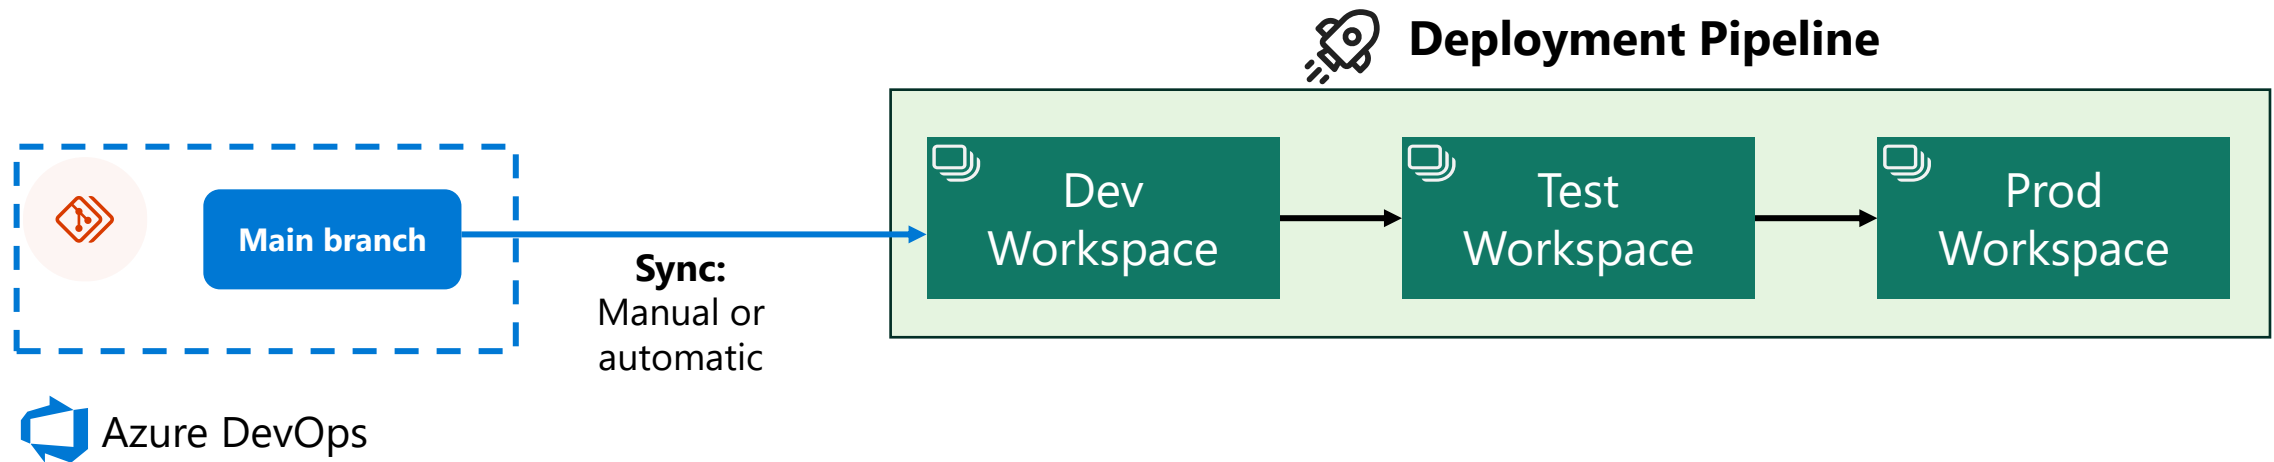

**Custom changes
during
deployments**

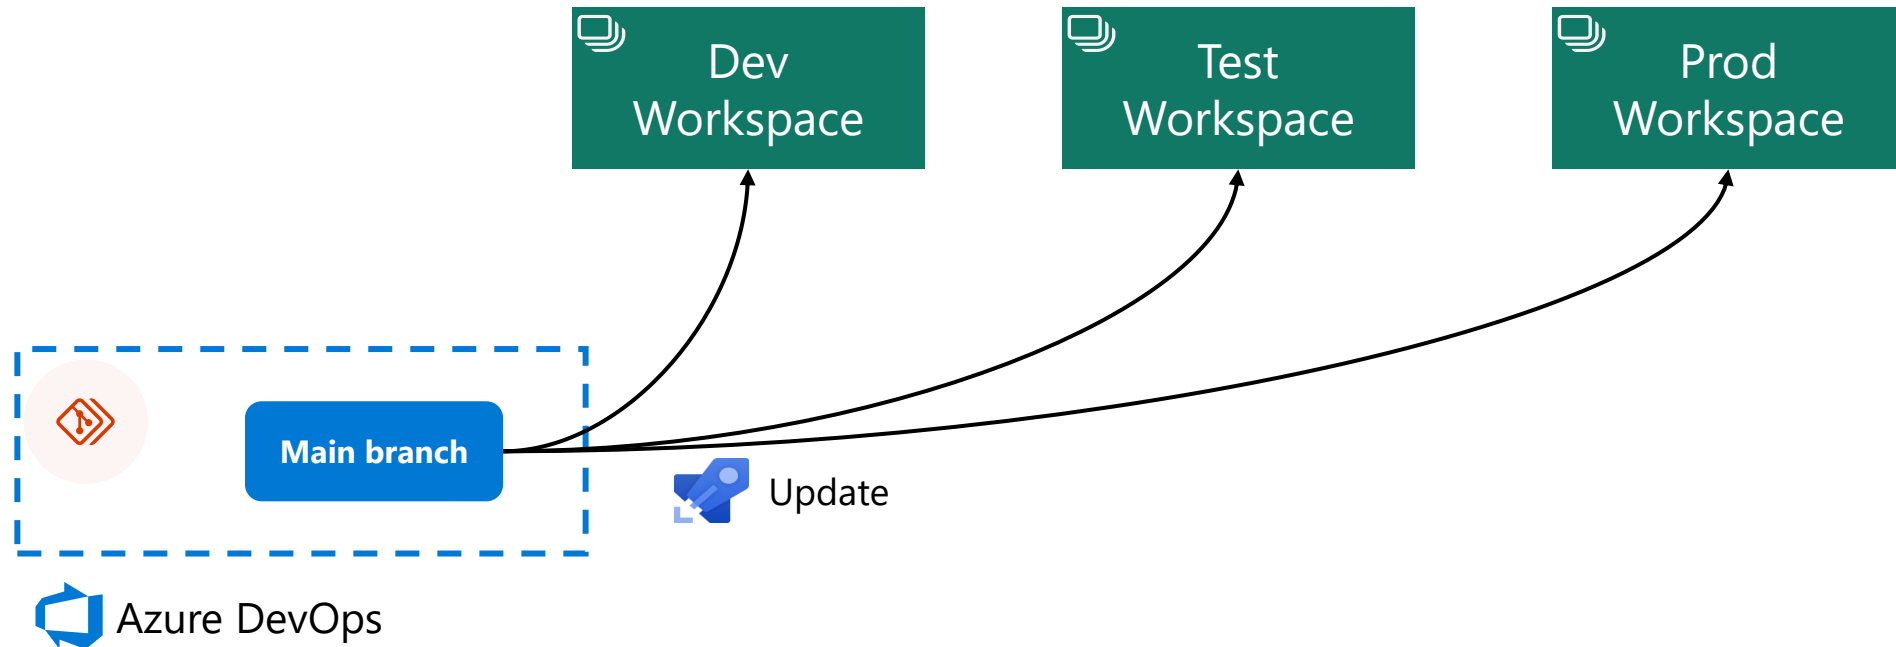

Complexity

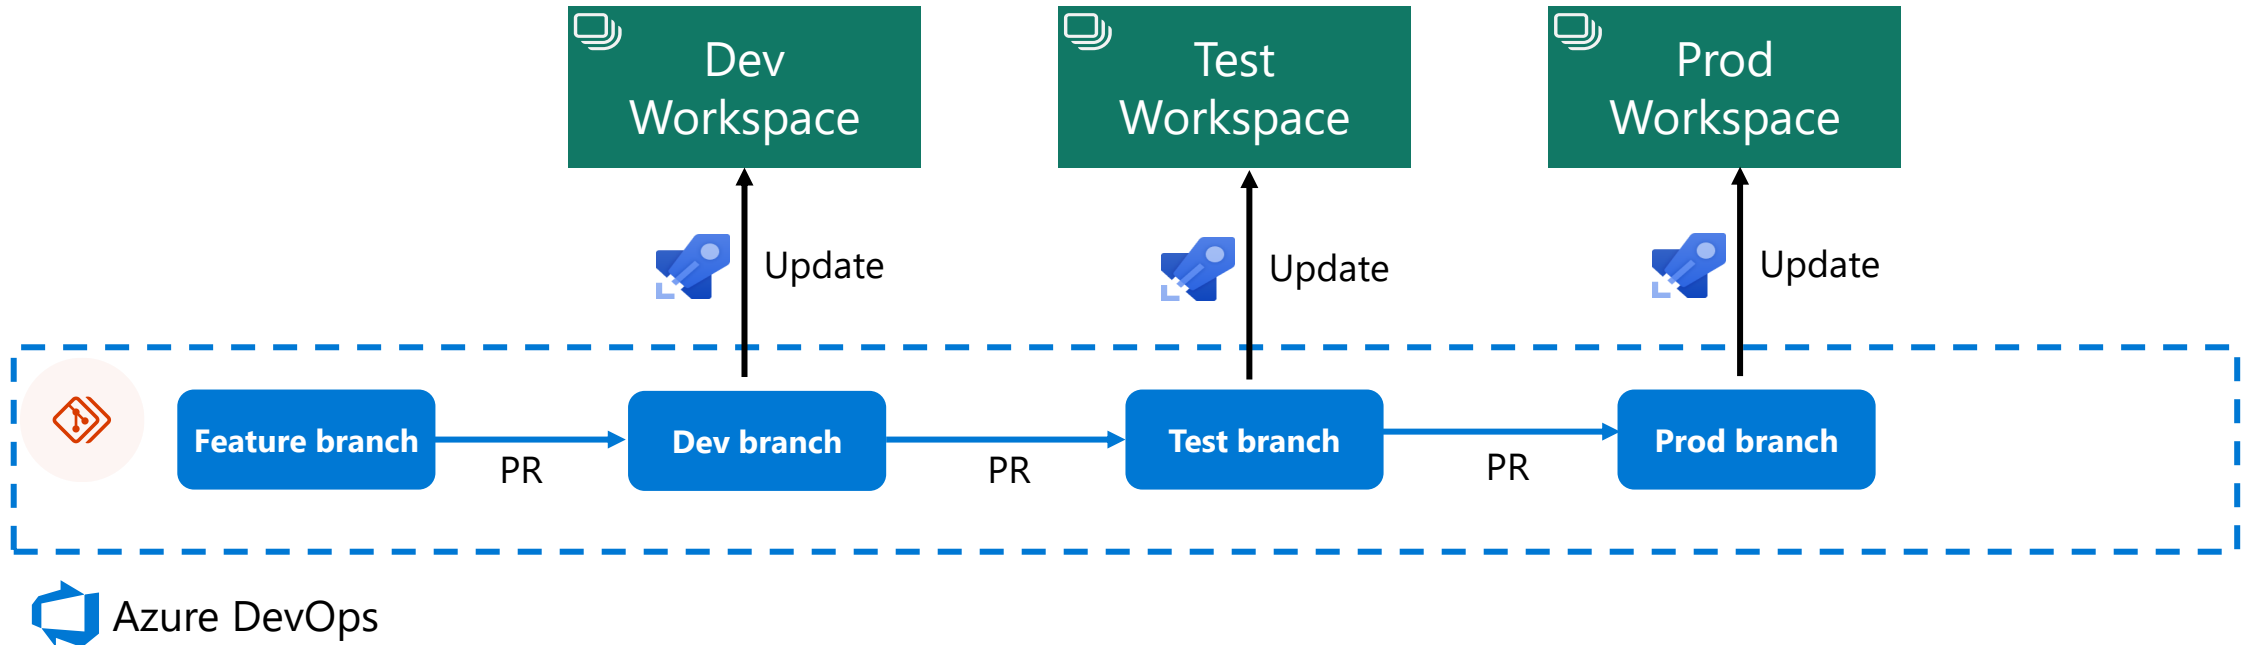

CD Strategy – Fabric Deployment Pipelines

CD Strategy – Git based Single Main Branch

CD Strategy – Git based Multiple Main Branches

CD Strategies – Comparison

	Fabric Deployment Pipelines	Git – Single Main Branches	Git – Multiple Main Branches
Learning Curve	Low	High	Highest
Setup	Simple	Complex	Complex
Complexity	Low	High	Highest
Maintenance	Low	High	Highest
Cherry picking features	No	No	Yes
Custom changes during deployments	No	Yes	Yes
Automation	Low	High	High

Defining a CI/CD strategy for your team

Development tools required

Training and learning curve

Setup and maintenance complexity

Power BI only or Fabric items

Flexibility and automation capabilities

Combine & evaluate various CI/CD strategies

Recommendations & Best Practices

Connect dev workspace to Git and use deployment pipelines

Use client tools for items that support it

Developer should work in isolated environments

Enforce reviews and automated quality checks

Merging non-working code on the main branch should be unacceptable

Set up branch naming conventions

Provide detailed commit messages

Questions?

Takeaways

**Train and
promote DevOps
in your teams**

**Automate quality
checks**

**Combine and
evaluate different
CI/CD strategies**

Thank You!!
