# Agenda

**TMDL: What, Why, When & How**

**Using TMDL with Local and Remote Models**

**Tips to unlock full potential**

**TMDL...???**

# What is TMDL

Tabular **M**odel **D**efinition **L**anguage

**Serialized** metadata of a semantic model

Each table, perspective, role, and culture stored as a separate **text** file

**How does this look like?**

# Why do we need TMDL

**PBIX**

**Power BI Desktop or  
external tools only**

**Unsupported model  
changes with external tools**

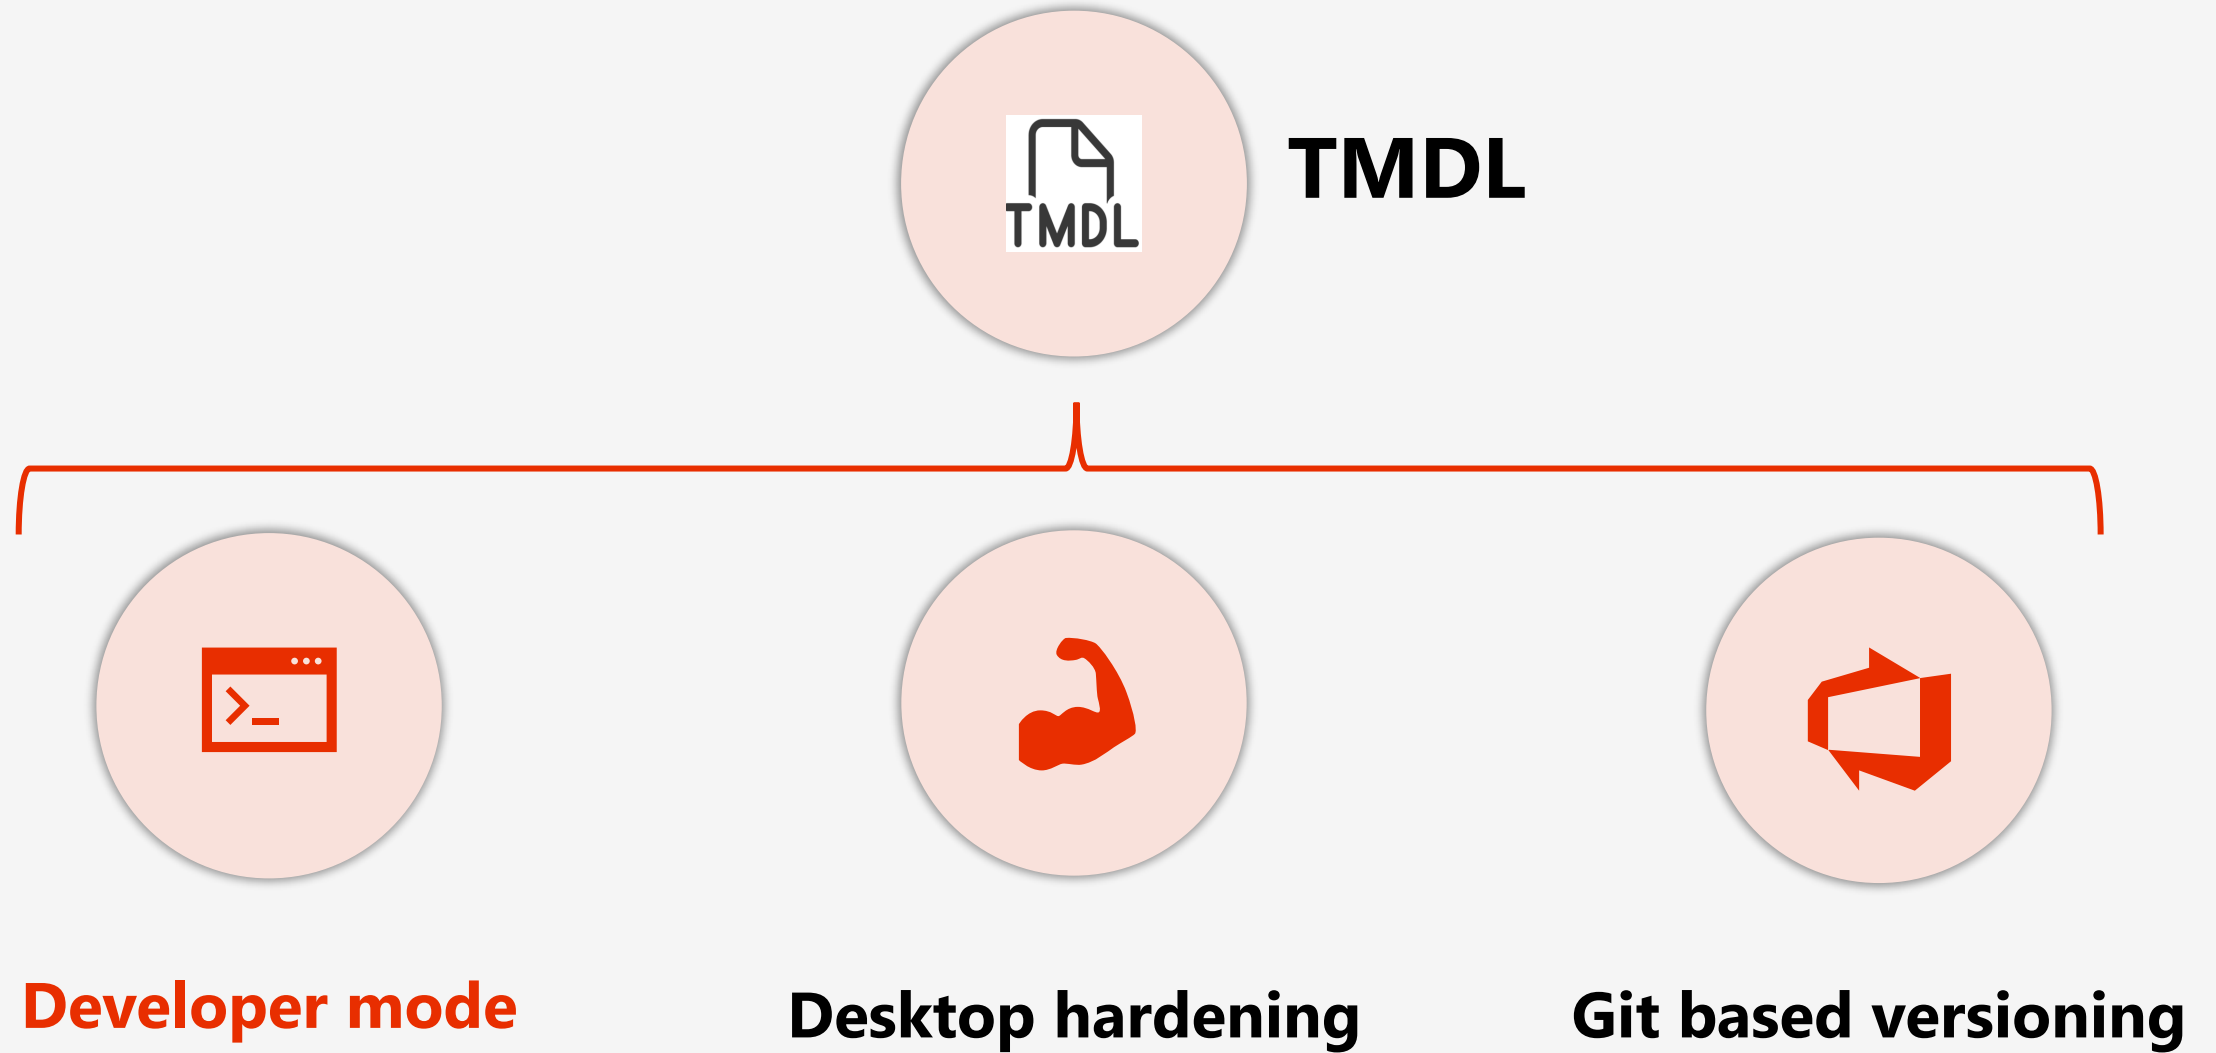

**Lack of Git based  
Version Control**

# Version Control

Name
 Sales Hub 147
 Sales Hub 147_final
 Sales Hub 147_final_final
 Sales Hub 147_final_final_v2
 Sales Hub 148
 Sales Hub

# Why do we need TMDL

# What can we do with TMDL

**Create Objects**

**Edit Objects &  
Properties**

**Objects &  
Properties  
without a UI in  
PBI Desktop**

**Objects as Text**

# When to use TMDL

**Viewing multiple objects at once**

**Making multiple changes at once**

**Work with objects & properties without an UI**

**Reuse objects across different models**

**View & edit Power Query transformations**

**Take a “one-page” backup of semantic model**

**Working with a code first experience**

# Using TMDL with *Local Models*

**Let's see it in Action!**

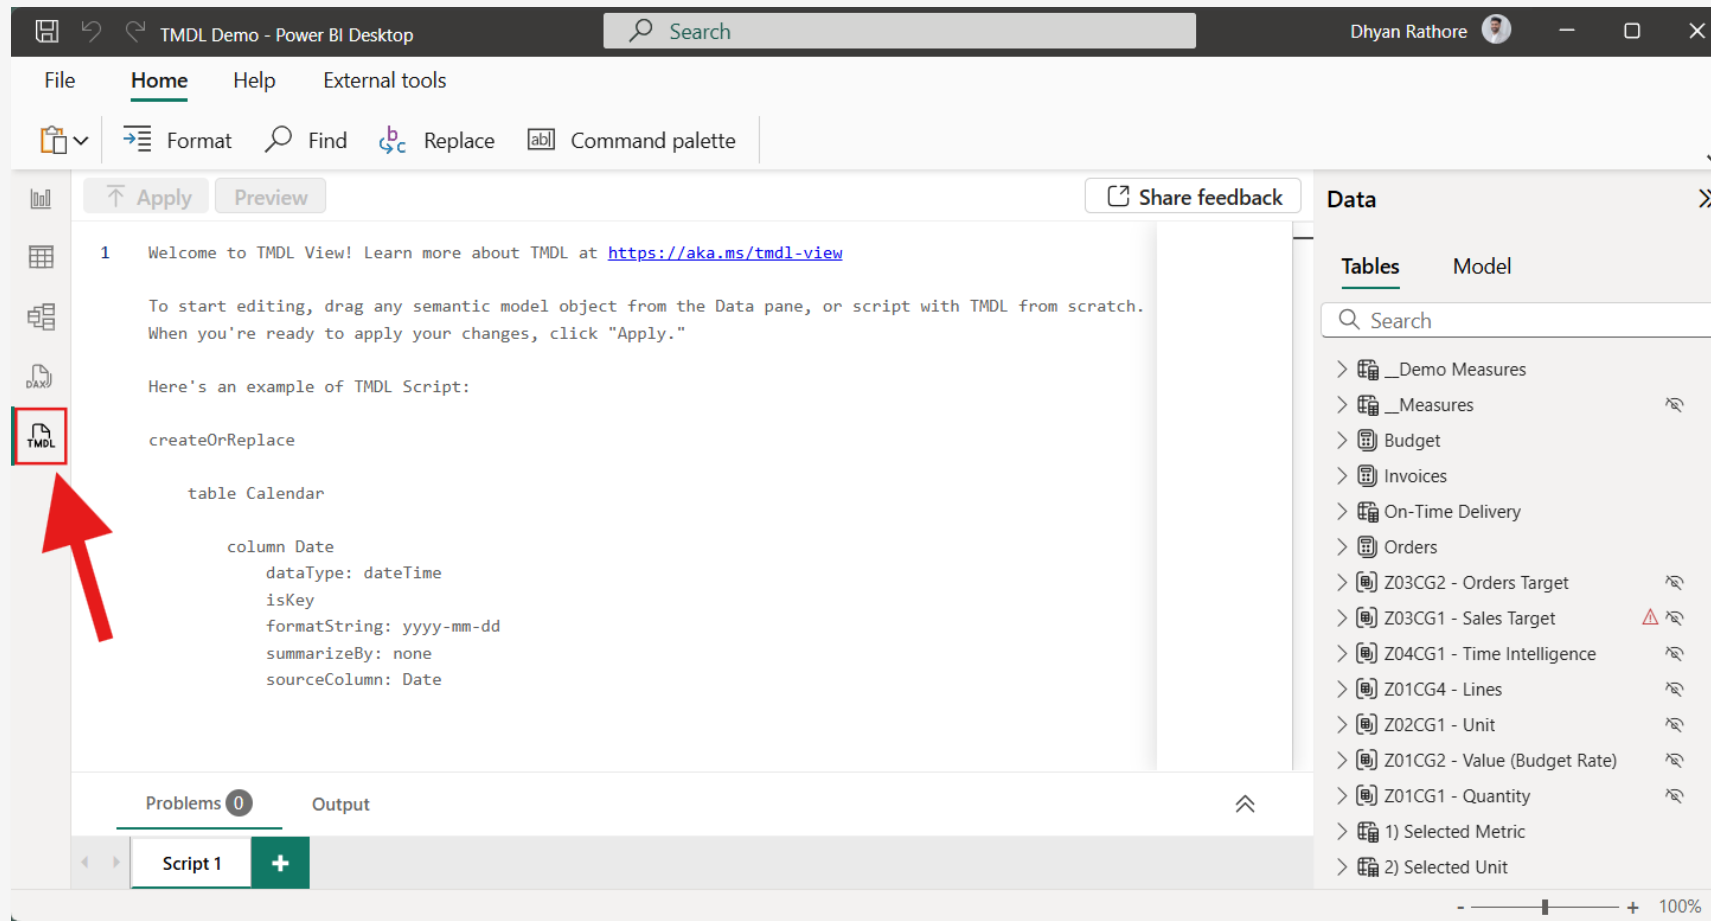

# **Different Types of TMDL**

# TMDL Scripts

## TMDL View

- **Power BI Desktop** – GA since September 2025 release 🍷
- **Power BI Web** – Planned

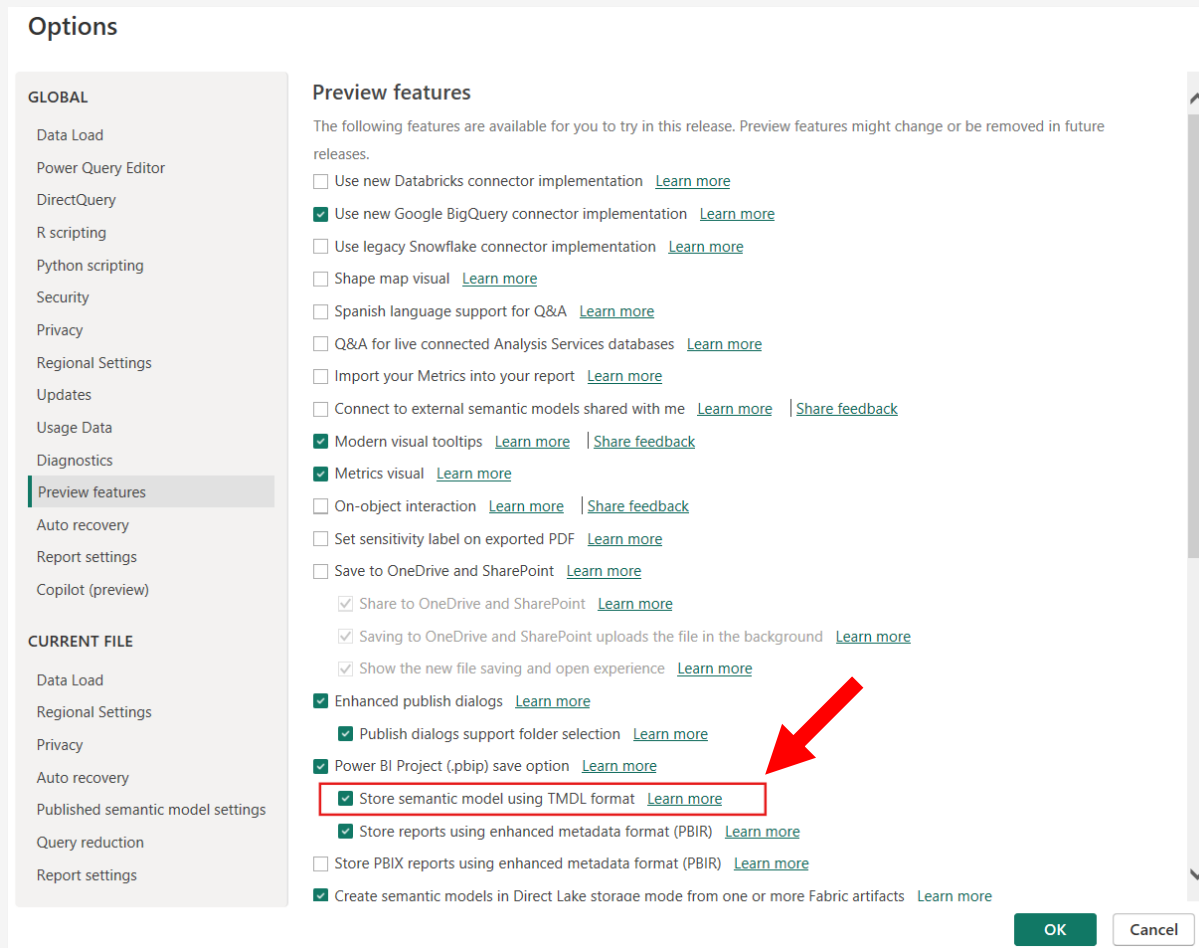

# TMDL File Format

## Enable TMDL File Format

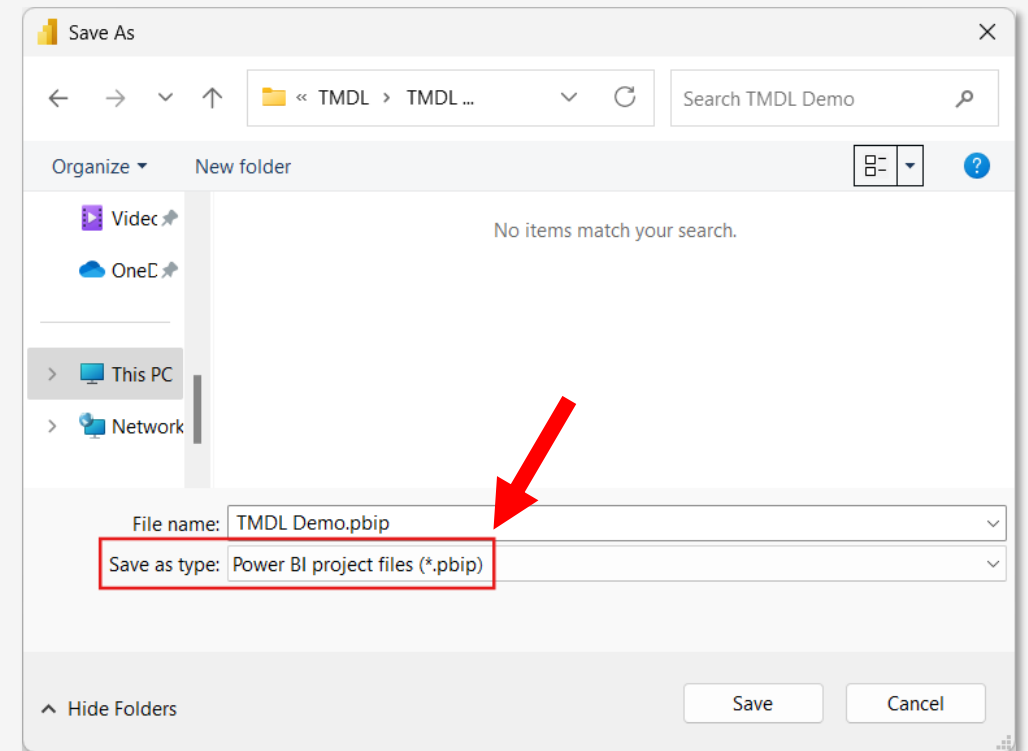

[Preview in Desktop](#)

File > Options and settings > Options > Preview features (only with pbip)

## Save pbix as .pbip

File > Save as

In Power BI Service, TMDL is the default storage mode for semantic models

**Let's look under the hood!**

# Summary

## TMDL Scripts GA

Script containing the object metadata as text that Power BI Desktop can use to make changes to the model.

Keywords: *createOrReplace*, *ref*

```
1 createOrReplace
2
3 table Date
4     lineageTag: 0bb45e29-3908-422d-ade4-4100434bdfa4
5     dataCategory: Time
6
7     measure '# Workdays MTD' =
8         CALCULATE(
9             MAX( 'Date'[Workdays MTD] ),
10            'Date'[IsDateInScope] = TRUE
11        )
12     formatString: #,##0
13     displayFolder: 5. Weekday / Workday\Measures\# Workdays
14     lineageTag: 4b0555ab-6912-4d3c-b613-0d2d542a6965
```

## TMDL Files Preview in Desktop

Files storing object metadata as text that Power BI can use to render a model.

File extension: *tmdl*

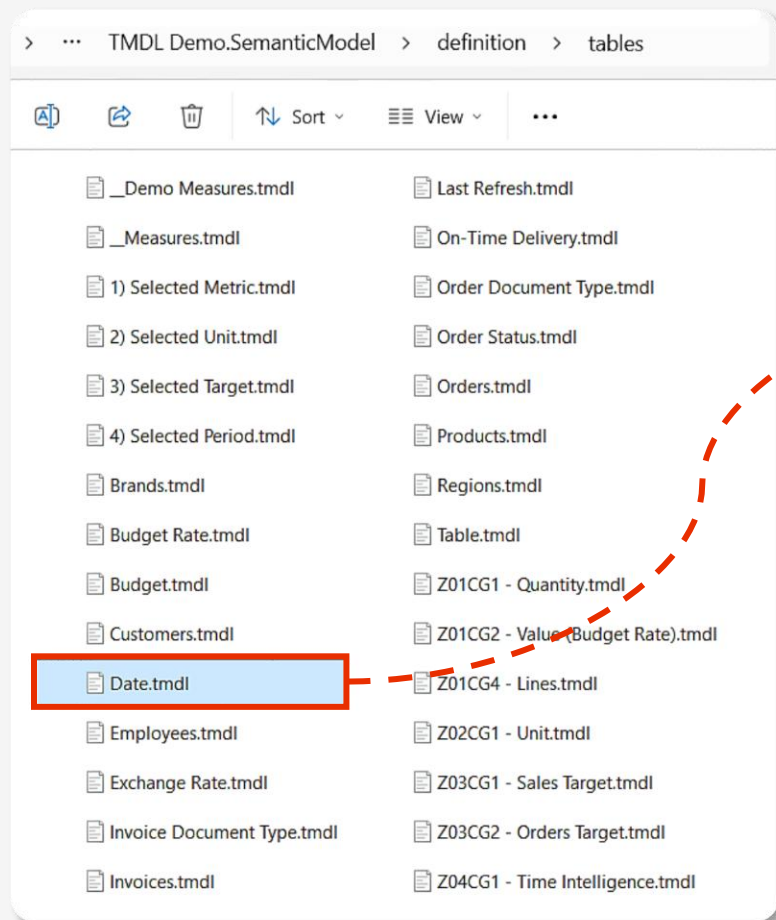

```
1 table Date
2     lineageTag: 0bb45e29-3908-422d-ade4-4100434bdfa4
3     dataCategory: Time
4
5     measure '# Workdays MTD' =
6         CALCULATE(
7             MAX( 'Date'[Workdays MTD] ),
8             'Date'[IsDateInScope] = TRUE
9         )
10     formatString: #,##0
11     displayFolder: 5. Weekday / Workday\Measures\# Workdays
12     lineageTag: 4b0555ab-6912-4d3c-b613-0d2d542a6965
```

**One can be used without using the other**

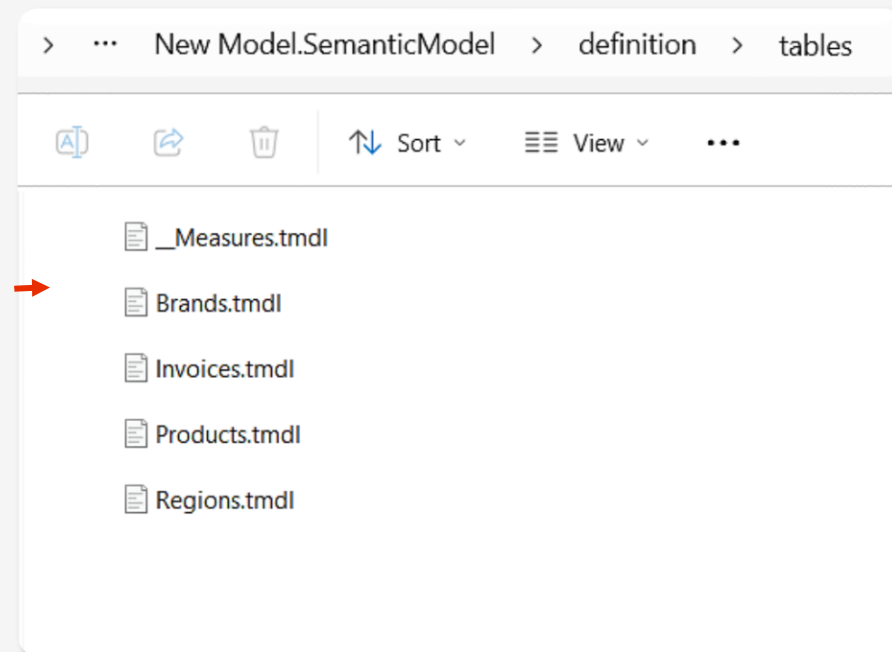

**Can we use TMDL files to do things  
that we did with TMDL scripts?**

# Using TMDL Files with *Local Models*

# Local Model: Reuse Objects with **TMDL Files**

**Source Model: TMDL Files**

**Target Model: TMDL Files**

1. Move the object TMDL files from source to target model TMDL files
2. Relaunch Power BI Desktop
3. Refresh the object (if required)

Power BI Desktop auto-detect changes: Planned

# Local Model: Working with TMDL Files

## Tool Up

Visual Studio Code (VS Code)

TMDL Extension for VS Code

# Updating *Remote Models* with TMDL

To change a model in Power BI Service, do we go for  
**TMDL Scripts** or **TMDL Files**?

# Remote Model: Update with **TMDL Files**

## Tool Up

Visual Studio Code (VS Code)

TMDL Extension for VS Code

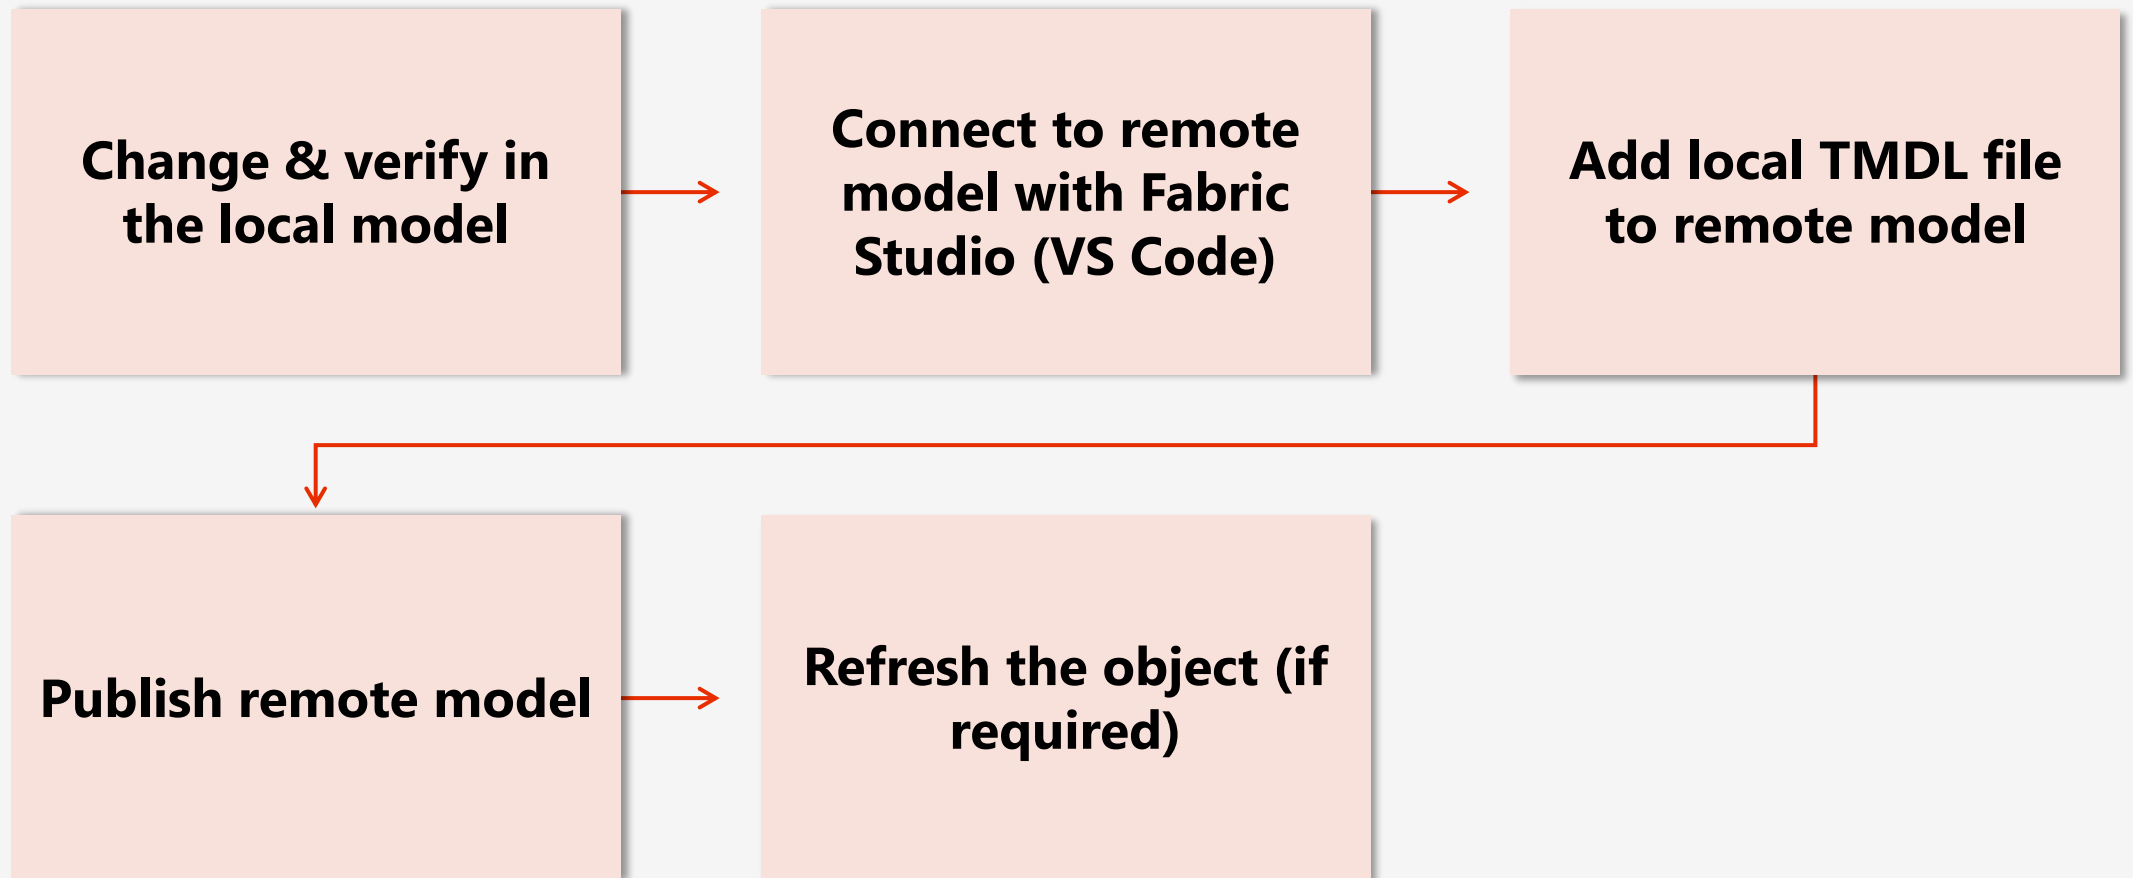

Fabric Studio Extension for  
VS Code

# **TMDL Magic with Fabric Studio!**

# Remote Model: Update with **TMDL Files**

# **TMDL: The Smart Way**

# When **NOT** to use TMDL

**Editing DAX or Power Query**

**When the user interface is simpler**

**Changing unknown properties**

**Creating Perspectives for the first time**

# Tips

**Default values of properties are not shown**

**A closed TMDL script tab can't be recovered**

**Preview before applying changes**

**No undo for data modeling changes**

# Some Warnings

**Careful with Find & Replace as you can make unintended changes**

**Dependencies are not cross highlighted**

**TMDL only changes the model metadata and does not update the visuals**

# Recap

**What, Why,  
When & How**

**TMDL Scripts  
with local  
models**

**TMDL files with  
local & remote  
models**

**Tips & warning  
to unlock full  
potential**

The logo for 'bits2BI' features the word 'bits' in blue with binary code (0s and 1s) integrated into the letters. A yellow arrow points from 'bits' to '2', which is also yellow. 'BI' is in green.
